

Guardian Population Health Platform

AI-Powered Population Health, Care Management & Value-Based Care Platform

Who We Serve

- ACOs
- CINs
- Health Plans
- Medical Groups
- Health Systems
- Employer Groups

Core Modules

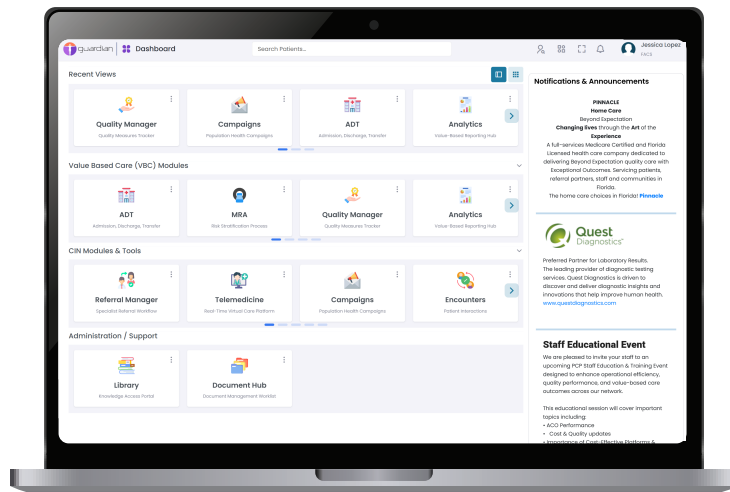

- ADT • HIE • Quality
- Analytics • Care Management
- Patient Engagement • Telemedicine
- Risk Stratification, MRA
- AI Enabled Transition of Care
- Referral Management within CIN

Results

- Improve Outcomes
- Reduce Cost
- Improve Quality
- Increase Revenue
- Support Value-Based Care
- Enhance Patient Engagement

Why Choose Guardian

- AI-Powered
- HITRUST Certified
- Enterprise Scale
- Cloud Native
- Multi-Tenant
- End-to-End Population Health
- Real-Time Analytics
- Interoperability
- Value-Based Care Ready

Unified Population Health Platform

Guardian Population Health Platform is an AI-powered enterprise solution that unifies population health, care management, analytics, quality, patient engagement, and interoperability into a single platform.

Designed for Value-Based Care

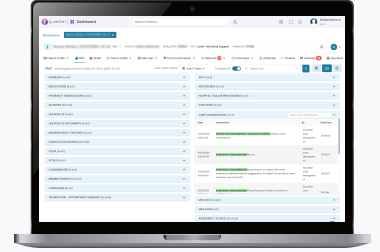

Designed for ACOs, CINs, Medical Groups, Health Systems, Health Plans, and IPAs, Guardian helps organizations improve clinical outcomes, close care gaps, reduce costs, and succeed in value-based care through real-time data, advanced analytics, and intelligent workflows.

Enterprise-Grade Security & Interoperability

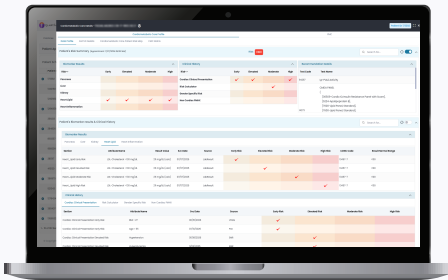

Built with enterprise-grade interoperability and security, Guardian is HITRUST certified and supports industry standards including FHIR, HL7, and CMS data formats. With AI-driven insights, real-time analytics, risk stratification, and care coordination tools, Guardian enables organizations to make smarter decisions, engage patients earlier, and drive measurable improvements in quality and financial performance.

1 Unified Longitudinal Patient Record (Patient 360 with degree symbol)

Dynamic Patient Master Chart: Integrated clinical and financial data from multiple sources (Payers Claims, EHRs, Labs, HIE, Pharmacy, Radiology, Hospitals, PCPs, Specialist) in real-time that is timely, up-to-date and immediately accessible to patients and providers. The PMC provides an instant individualized longitudinal patient profile.

- Diagnoses
- Medications
- Vitals
- Lab Results
- Procedures
- Radiology Reads
- Care Gaps
- MRA Gaps
- Risk Scores
- Provider History
- Interventions
- Care Plans
- Behavioral health & Social determinants

2 Risk Stratification:

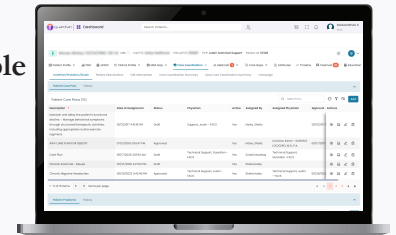

Guardian's proprietary risk stratification methodology combines predictive analytics and machine learning to identify patients at risk of adverse clinical events, enabling proactive interventions and optimized care management.

- Clinical Risk (chronic conditions, labs, vitals)
- Utilization Risk (ED visits, admissions, readmissions)
- Medication Risk (polypharmacy, adherence)
- Social Risk (SDOH)
- Financial Risk (cost of care)
- Behavioral Health Risk

3 Care Management

The Guardian Care Management module provides care teams with a centralized workspace to identify, enroll, assess, monitor, and manage patients across multiple care management programs throughout the continuum of care.

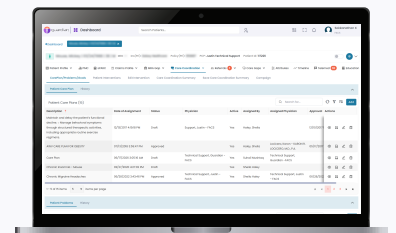

The platform supports comprehensive patient assessments, care coordination, care team collaboration, task management, referrals, transitions of care, chronic disease management, remote patient monitoring, medication adherence, and patient outreach.

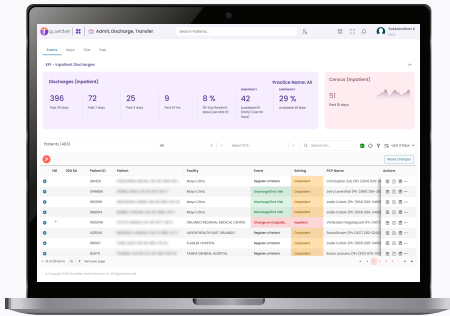

4 Individualized Patient care plan and follow-up

The Guardian Care Plan Builder enables the creation of personalized, evidence-based care plans that align clinical best practices with each patient's unique medical conditions, care goals, risk factors, behavioral health needs, and social determinants of health (SDOH).

Intelligent workflow automation, AI-assisted recommendations, and integrated communication tools help streamline care coordination, improve patient engagement, enhance adherence to treatment plans, and support better clinical outcomes across the continuum of care.

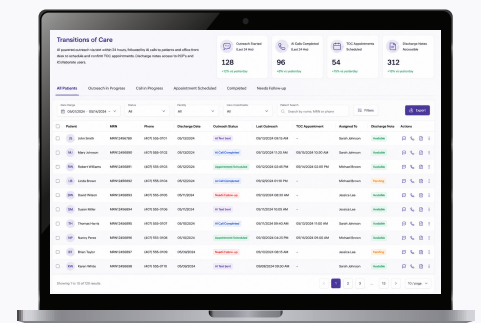

5 Admit & Discharge notifications:

Receive real-time Admission, Discharge, and Transfer (ADT) notifications and automatically retrieve hospital discharge summaries and transition-of-care documentation through national Health Information Exchanges (HIEs), enabling care teams to initiate timely post-discharge interventions and reduce readmissions.

6 Transitions of Care:

AI powered outreach via text within 24 hours, followed by AI calls to patients and office front desk to schedule and confirm TOC appointments. Discharge notes access to PCP's.

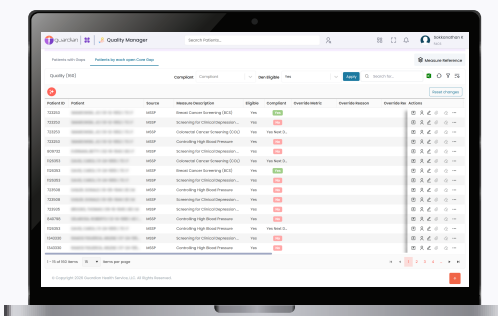

7 Telemedicine

Provides a seamless virtual care experience with secure, one-click access to video consultations—no patient login or software installation required. Patients join directly from a secure link and are placed in a virtual waiting room until the provider is ready. During each visit, providers have real-time access to the patient's comprehensive clinical record ensuring informed and efficient care delivery.

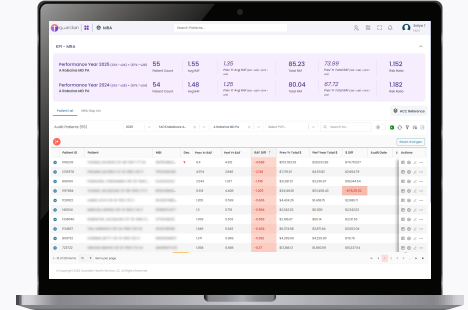

8 Quality Gap Management

Proactive identification, monitoring, and closure of care gaps. The platform continuously analyzes clinical and claims data to identify patients with open quality gaps. Interactive dashboards and actionable insights help care teams improve MSSP, MIPS, HEDIS® and other quality program outcomes.

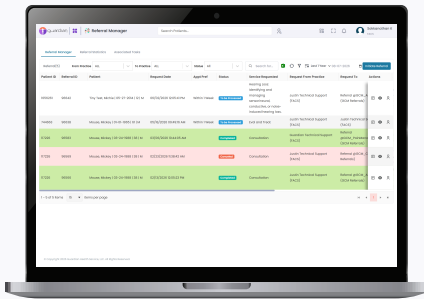

9 Advanced Population Health Analytics

The Guardian platform offers a comprehensive view of clinical, operational, financial, and quality performance across patient populations. The platform delivers interactive dashboards, predictive insights, configurable reports, and real-time KPIs that enable healthcare organizations to identify trends, monitor utilization, evaluate provider performance and measure value-based care outcomes.

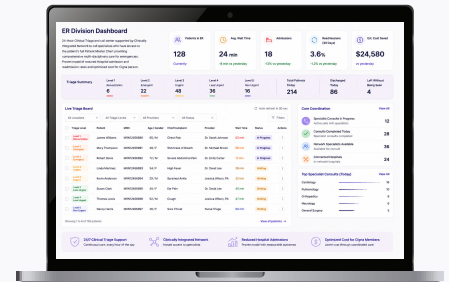

10 Referral Management

The Guardian platform enables closed-loop referral management by electronically creating, routing, and tracking referrals between primary care providers and specialists within the Clinically Integrated Network (CIN). The platform supports both manual referral creation and automated referral generation from Direct Secure Messaging (DSM) received from provider EMRs. Real-time notifications and referral status tracking ensure complete visibility throughout the referral lifecycle.

11 Remote Patient Monitoring

The Guardian Platform systematically integrates RPM for patients with CHF, Elevated BP, Diabetes, COPD, and Obesity.

12 Cardiometabolic Care: Risk Insights & Lab Gap Closure

The Guardian platform leverages clinical history and biomarker data to identify patients at risk for cardiovascular disease. It proactively detects gaps in lab tests and provides intelligent test recommendations to help providers better assess, manage, and treat patients. By enabling early identification of risk factors and proactive care interventions within primary care settings, the solution supports improved outcomes and helps reduce preventable complications.

Patient Profile

- Patient Master Chart (Patient 360)
- Claims/Utilization View
- Risk Stratification
- MRA Gaps
- Care Gaps
- Care Plan Builder
- CM - Goals, Interventions, Outcomes
- Referral Management
- Longitudinal Timeline View
- Telemedicine
- Patient Education
- Demographics updates
- Vitals
- Problems
- Medications
- Allergies
- Lab Results
- Encounters
- ADT
- HIE Search
- Direct Secure Message
- Documents Upload
- Scales, Logs, Forms
- Providers
- Patient Consent
- Immunizations
- Medical History
- Services
- Family History
- Advanced Directives

Analytics

- Executive Dashboards
- Real-Time KPI Monitoring
- Population Health Analytics
- Financial & Cost Analytics
- Risk Analytics
- Quality Measure Analytics
- PMPM/PMPY Analytics
- Provider Performance Analytics
- Utilization Analytics
- Care Management Analytics
- Referral Analytics
- Predictive Analytics
- Custom Reports & Dashboards
- Drill-Down & Drill-Through Analysis
- Scheduled Report Distribution
- Benchmarking & Trend Analysis
- Data Export & Sharing
- Ad Hoc Reporting

Care Management

- Patient Identification & Enrollment
- Risk-Based Patient Prioritization
- Comprehensive Patient Assessments
- Personalized Care Plans
- AI-Assisted Care Planning
- Goal & Intervention Tracking
- Care Team Collaboration
- Patient Outreach & Engagement
- Conversational AI Patient Communication
- CCM, TCM, RPM & PCM Support
- Care Manager Dashboards
- Real-Time Notifications
- Care Management Analytics
- Task & Workflow Management
- Care Coordination
- Transition of Care Management
- Medication Management
- ADT Monitoring & Alerts

Risk Stratification

- Patient Risk Identification
- Population Risk Stratification
- Proprietary Multidimensional Risk Scoring
- Real-Time Risk Recalculation using Live Clinical Data
- AI & Machine Learning-Driven Event Prediction
- Predictive Analytics
- Cardiometabolic Risk Assessment
- Integrated CMS HCC V24 & V28 Models
- RAF Score Calculation
- Biomarker Risk Analysis

MRA

- CMS HCC V24 & V28 Support
- RAF Score Calculation
- HCC Gap Identification
- Suspected Condition Identification
- Coding Opportunity Identification
- Diagnosis Validation
- Chronic Condition Tracking
- Risk Adjustment Analytics
- Integrated Clinical & Claims Review
- Ability to document Risk Coder Chart Audits

ADT / TOC

- Real-Time ADT Notifications
- Admission, Discharge & Transfer Monitoring
- National HIE Connectivity
- Automated Discharge Summary Retrieval
- Transition of Care Management
- Conversational AI for Patient Outreach and Follow-Up Scheduling
- Transition of Care Management
- Post-Discharge Care Coordination
- Readmission Risk Identification
- Avoidable ER Identification
- Task & Intervention Management
- TOC Performance Analytics
- Hospitalist Outreach
- Real-Time Notifications

Quality Manager

- Quality Measure Management
- CMS Star Ratings
- MSSP Quality Measures
- MIPS Performance
- Care Gap Identification
- Gap Closure Management
- Preventive Care Tracking
- Provider Quality Scorecards
- National Registry (Approved Yearly)
- Quality Measure Library
- Manual Override capability

Referral Manager

- Electronic Referral Management
- Closed-Loop Referral Tracking
- Automated Referral Creation from Direct Secure Messaging (DSM)
- PCP & Specialist Coordination
- Referral Status Monitoring
- Real-Time Notifications
- Referral Workflow Automation
- Referral Task Management
- Referral Analytics
- Document Uploads
- National HIE Connectivity
- EMR Integration

Telemedicine

- Secure Video Consult
- One-Click Patient Access
- No Patient Login Required
- Browser-Based Virtual Visits
- Virtual Waiting Room
- Multiple Virtual Rooms
- Appointment Scheduling
- Patient Clinical History Access
- SMS & Email Notifications
- Clinical Documentation

Encounters - AWW/HRA

- Initial Preventive Physical Examination (IPPE)
- Annual Wellness Visit (AWV)
- Patient Health Risk Assessment (HRA)
- Patient Demographics
- Vital Signs
- Advance Directives
- Family History
- Problem List
- Medication List
- Functional Assessment (ADL)
- Psychological Assessment
- Cognitive Assessment
- Pain Assessment
- Tobacco Cessation Counseling
- Alcohol Assessment
- Physician Visits
- Hospitalizations
- Surgeries
- Preventive Screenings
- Personalized Prevention Plan Services

Scales/ Logs/ Forms

- Standardized Clinical Assessment Scales
- 150+ Scales available
- Depression Screening
- Cognitive Assessments
- Fall Risk Assessments
- Custom Assessment Forms
- Custom Scoring
- Electronic Questionnaires
- Care Plan Integration
- Various logs

HIE Interface

- National & Regional HIE Connectivity
- Cross-Organization Patient Lookup
- Automated Discharge Summary retrieval from Hospitals
- Clinical Document Exchange (CCD/C-CDA)
- Secure Data Exchange
- Audit Trail & Compliance
- Longitudinal Patient Record Aggregation
- Automated Transition of Care Workflows
- Near Real-Time Clinical Data Synchronization

Campaigns

- Patient Population Segmentation
- Create Campaigns for specific list of patients
- Track status on individual patients
- Access to patients clinical history
- Easily ability to add patients to a campaign
- Campaign Dashboard.
- Add Comments
- Add Interventions

CIN Setup

- Ability to group practices and users by a Network
- Exchange Referrals
- Geo Map of Providers in the network
- Configurable via an Administration Module
- Easy visibility to specialists in the network
- All modules and features available to CIN participants
- No restrictions or dependency on Payer contracts
- Search by name, specialty, zip

Practice/User Administration

- Add Network Group
- Practice to Payer Contract Configuration
- NPI & TINs Updates
- Add Practices
- Phone and Email setup
- Ability to set up virtual Admin Practice
- Add Users
- Practice to Network Group Configuration
- Tenant Isolation
- Configure Providers
- Module Configurations
- Announcements and Notifications Configuration
- Payer Contract Configuration
- User Roles defined

Health Library

- Store and view PDF, Word, HTML documents
- Easy configuration for Upload and Access
- Store and playback Videos
- Common repository for users

Registry

- Guardian is a CMS certified MIPS Registry
- Validation and Submission of Measures

Patient Scheduling

- EMR Integration
- Ability to schedule a patient via APIs
- Ingest Patient Appointments

DSM (Direct Secure Messaging) Function

- Guardian has its own DSM Address
- Ability to sent DSM messages from Guardian to EMRs
- Ability to sent DSM messages from EMR to Guardian
- Automated CCDA read and Patient Search

Enterprise Interoperability & Data Integration

- EMR/EHR Connectivity
- National & Regional HIE Integration
- Real-Time ADT Data Exchange
- Clinical Document Exchange
- Automated Discharge Summary Retrieval
- HL7 v2.x Support
- FHIR R4 APIs
- Direct Secure Messaging (DSM)
- Claims Data Integration
- CMS CCLF Integration
- BCDA Integration
- Payer Data Connectivity
- Laboratory & Pharmacy Integration
- API-Based Integration
- Batch & Real-Time Data Processing
- Flat File Integration
- Data Normalization & Transformation
- Data Validation
- Data Deduplication
- Patient Matching (MPI)
- Provider Attribution

Enterprise Architecture & Security

- Enterprise Cloud Architecture
- Multi-Tenant Platform Design
- Scalable & High-Availability Infrastructure
- Modular Application Architecture
- API-First Platform Design
- Secure Data Center Environment
- Production, Test & Development Environments
- HITRUST Certification
- HIPAA Compliance
- SOC 2 Security Controls
- Data Encryption at Rest and Transit
- Role-Based Access Control (RBAC)
- Multi-Factor Authentication (MFA)
- Single Sign-On (SSO)
- Comprehensive Audit Logging
- Data Backup & Disaster Recovery
- Business Continuity Management
- Tenant Data Isolation
- Secure API & Integration Framework
- Application Security Controls
- Privacy & Data Governance
- Operational Reliability
